

bluehorizon

proburn

“ The conditioned set sounded like they’d grown more bass, the soundstage increased in width and the treble seemed more alive ”

**Hi-Fi+**

**Cable burn-in**

High-quality audio cables improve over time when used in your hi-fi system. A hard, closed-in sound with a distinct lack of bass are qualities most noted when a cable is new; a cable that has been professionally ‘burned-in’ using Proburn will sound more open, extended and three-dimensional, with a more natural, less sterile performance overall.

**KEY FEATURES**

- Generates specific ultra-low and ultra-high frequencies to optimise cable performance
- Produces 10,000 times the upper frequency limit of a typical CD player
- Dramatically reduces the burn-in time required by new cables to within 48 hours
- More effective at optimising cable performance than music signals alone
- Keeps cables performing at their best – condition them for a period of 24 hours, every six to eight weeks, to nullify any negative charges and static problems

clean-IT

### Professional electrical contact cleaning fluid

In high-end audio, it is vital to maintain the integrity of the signal by making the best possible connection between components. By simply removing oxidation and contaminants from cable connectors, sonic performance is significantly improved.

#### KEY FEATURES

- Cleans all contaminants between sockets and connectors used in your audio system
- Safe to use on all metal surfaces
- Stabilizes similar and dissimilar metals to guarantee best possible contact and signal transfer
- Applicator brush, and cleaning cloth supplied
- Reduces contact resistance by half, independently tested by Hi-Fi Choice

“ An inexpensive tweak that does just what it claims to, cleaning up the sound by a small but significant amount... We also did some measurements which suggested contact resistance was halved ”

Hi-Fi Choice

Critical acclaim for Clean-IT

spike shoe

### Resonance suppresser supports for speakers and speaker stands

Blue Horizon's Ultimate Spike Shoes are designed to sit beneath spikes of floorstanding speakers, speaker stands or other cones. They serve a dual purpose, they protect flooring and enhance sound quality by suppressing resonance that leads to sonically damaging microphony in audio components.

The aluminium outer casing is filled with a unique proprietary mix of materials at opposite ends of the elasticity spectrum. The differing resonant frequencies of these ensure that resonance is cancelled equally across the audio band.

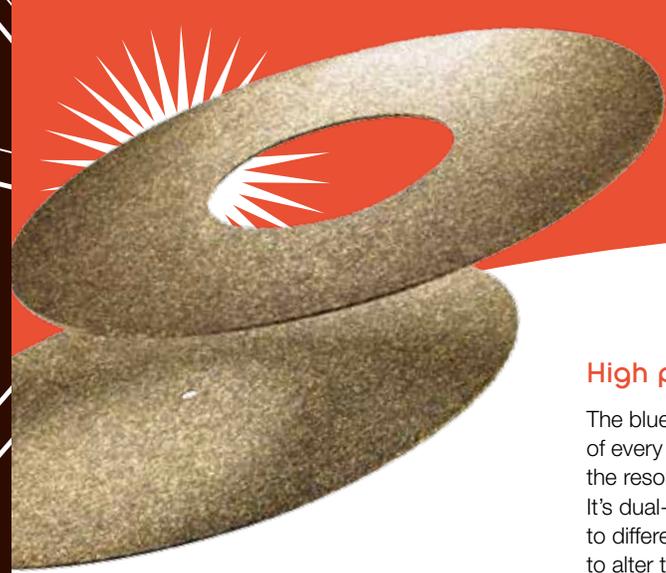

“ The sound showed noticeable improvements in both the tonal depth of all instruments, and in the focus of the soundstage... An effective, value-for-money product that displays considerable thought and attention to its quality ”

Hi-Fi World

#### KEY FEATURES

- Silver finished metal outer casing
- Reinforced metal plate allows spike loading of up to 100kg
- Extremely dense material which is a proprietary mixture of materials at opposite ends of the elasticity spectrum damps resonance equally across the audio band

### High performance record mat

The blue horizon record mat keeps firm hold of every record played, whilst suppressing the resonance generated during playback. It's dual-layer design makes it easy to adapt to different record thicknesses without needing to alter tonearm height (VTA). The result is the perfect coupling between record and platter – an utterly silent foundation, ensuring every drop of musical detail within the groove is delivered with unfettered clarity.

The Blue Horizon Record Mat delivers clear audible improvements - the sound gains greater resolution and focus, with enhanced detail and improved bass definition; music sounds more real, more vital.

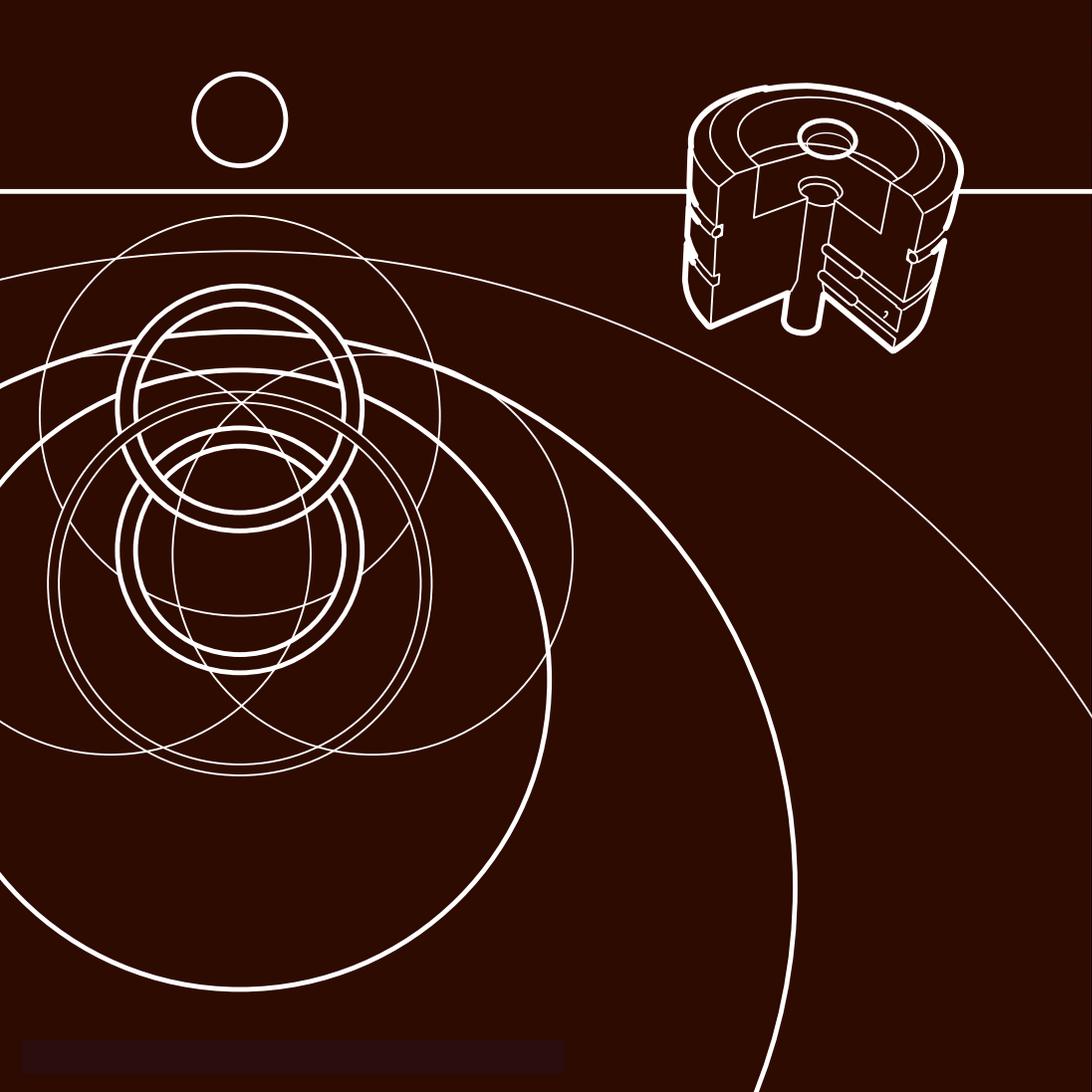

#### KEY FEATURES

- Unique composite in India Rubber, cork and leather holds firmly whilst suppressing resonance generated during playback
- Dual-layer design makes it easy to adapt to different record thicknesses without needing to adjust VTA

“ The Blue Horizon Mat brought order to the sonic chaos. Bass not only had structure for the first time but also a measure of breadth and depth... Vocals were far more engaging... Midrange duties revealed a greater sense of detail and a less flustered quality ”

Hi-Fi Choice Magazine

### Turn table bubble-level

If a turntable is to perform at its best, it is vital that the platter is absolutely level. A number of bubble-level devices are available to assist with turntable leveling, but none deliver the unerring accuracy of the Blue Horizon Prolevel.

Most bubble-level devices simply rest on the platter, acting like a regular spirit level. To ensure maximum precision, Prolevel slips over the spindle and, uniquely, grips it via a clamping mechanism using spring-loaded plungers situated within the main aluminium housing.

#### KEY FEATURES

- Unique system for precision levelling of turntables
- Most accurate system available using the spindle's vertical axis
- Weighs 120g, the weight of most LPs
- Works on all turntables
- Precision tool

“ A well thought out and finished precision leveling tool that does exactly what it says on the box ”

Hi-Fi World

probrush

### Anti-static record brush

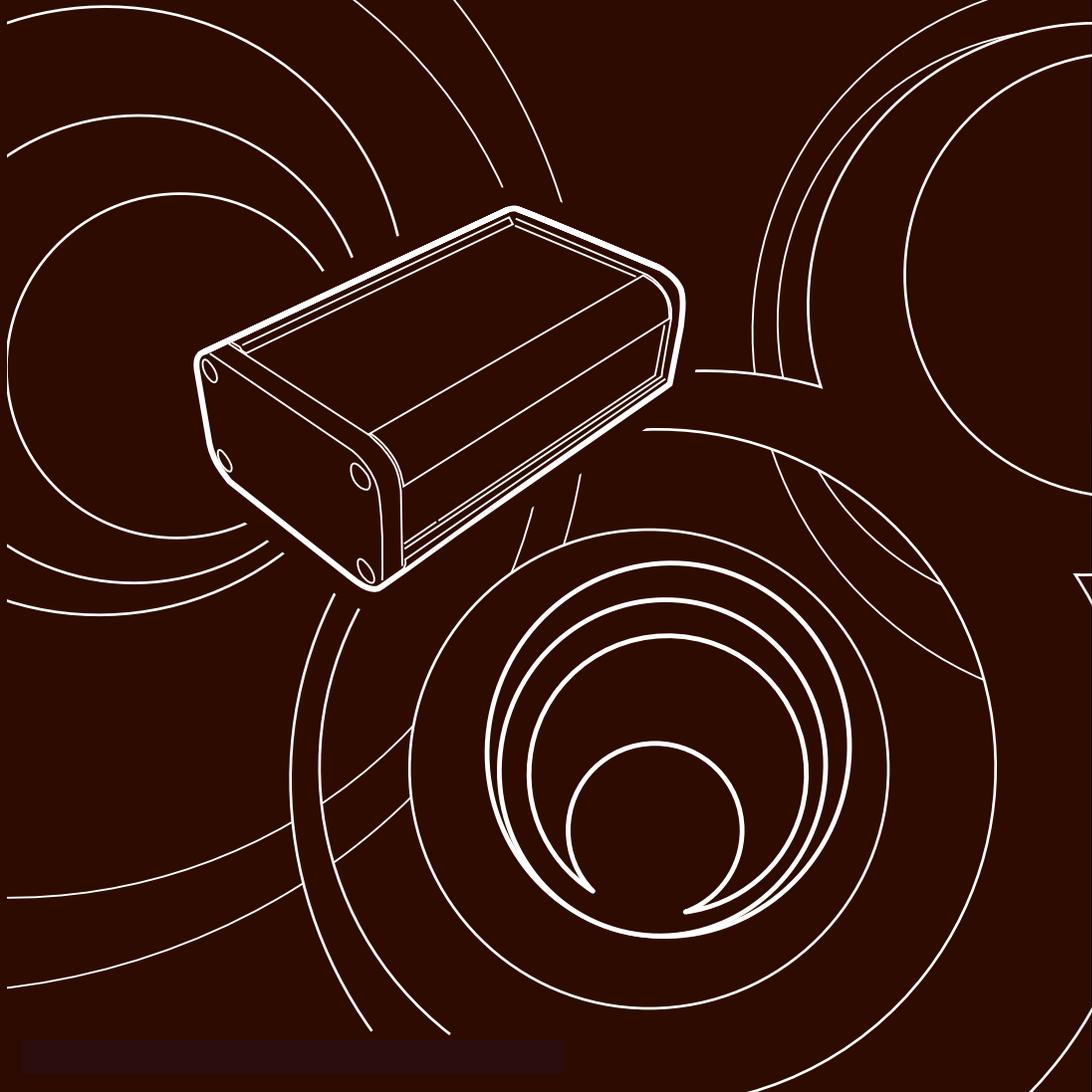

Probrush is both simple to use and highly effective at removing surface dust from records before playing. This improves and enhances your listening experience as well as preserving the life of not only your record collection but your phono cartridge too.

Using Probrush prior to vinyl replay also eliminates static build-up which can create pops and crackles. With over two million anti-static carbon fibre bristles Probrush is an essential tool for all turntable users.

#### KEY FEATURES

- Cleans deep into the grooves of vinyl records
- Integral stand with built-in dust removal mechanism
- Protects your turntable's stylus
- Preserves the life of vinyl records
- Simple and effective to use

profono

“ Discrete high quality phono pre amplifier giving enhanced performance for analogue replay ”

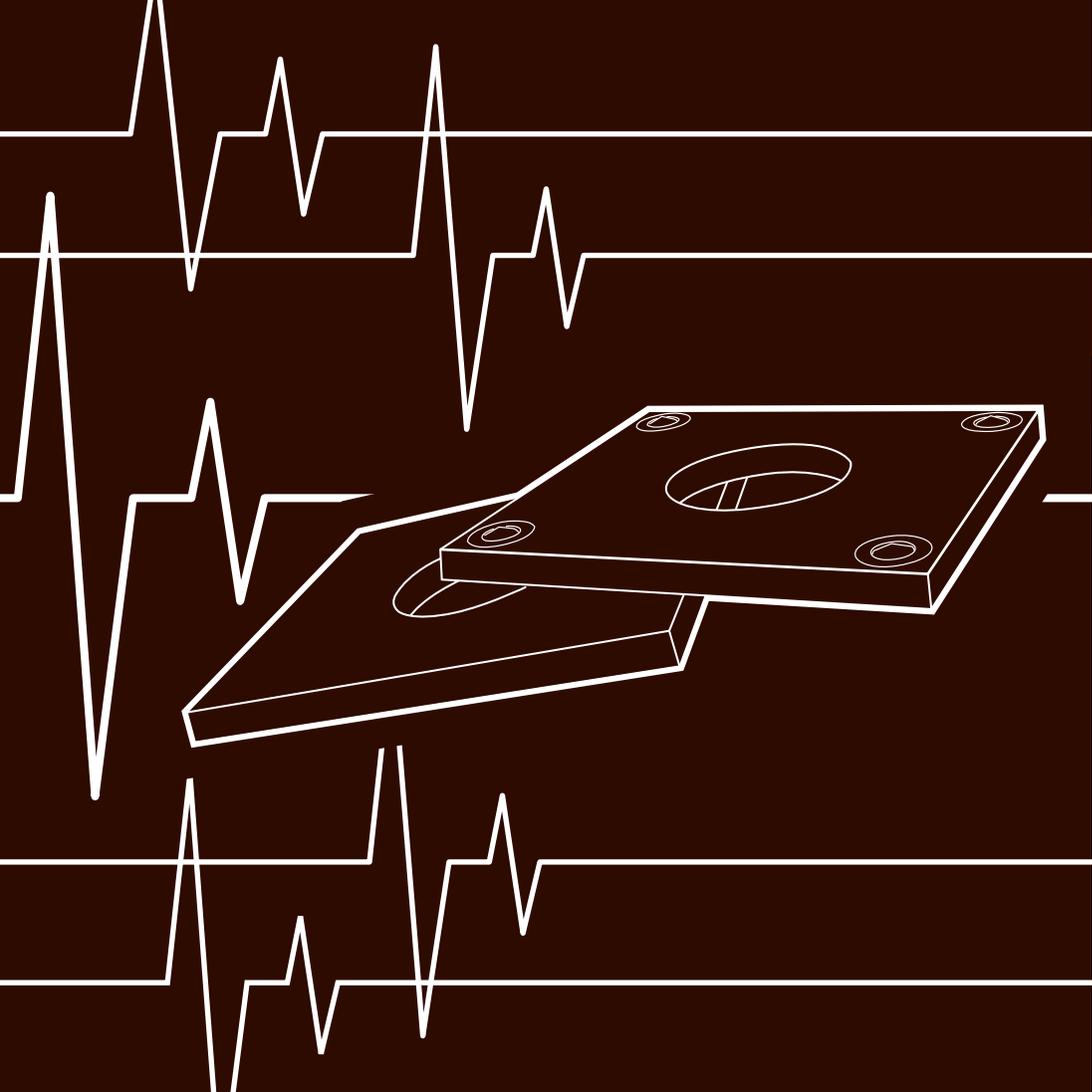

### High quality analogue phono amplifier

Profono is a discrete high quality analogue turntable cartridge amplifier which is installed before your pre-amp or integrated if you do not have a built in phono stage, or if the phono stage is of low quality. For improved sound, dynamics and a greater detailed performance connect your tone arm cable directly to Profono, and then connect to the auxiliary of your pre-amp or integrated amp using RCA inter connecting cables.

#### KEY FEATURES

- Fully adjustable/customised cartridge loading system
- Moving coil low, high settings and moving magnet
- Multi functional earth connection point
- Solid RFI resistant case, 170 x 80 x 50mm (L x W x H)
- Optional high quality power supply for upgrading later

sanctum

### Resonance control platform

Blue Horizon's Sanctum isolation platform is designed to sit beneath sensitive audio electronics, preventing unwanted resonance and sonically damaging microphone from limiting the performance of equipment.

Manufactured from precision CNC machined high density fibreboard. Four recesses feature a complex isolation foot made from a dense chaotic compound of cork, rubber and leather, whose construction and 'viscous-elastic' polymer break up resonance frequencies across a large frequency range.

#### KEY FEATURES

- Lowers distortion across the audio spectrum
- Improves detail, clarity and tonal neutrality
- Improves bass definition
- Delivers wide open and deep soundstages
- Enables more expressive dynamic contrast and shading to be revealed
- Lowers distortion across the audio spectrum

“ ...music appears to flow more effortlessly, silences during momentary pauses sound more natural and realistic ”

**Hi-Fi Choice**

“ Performance gains are very high compared to the moderate price ”
